Večernje Novosti

DANUBE SOUNDS EVERY ALARM

The Danube in Serbia is recording a historically low water level due to prolonged drought and high temperatures expected from 30 July, with temperatures ranging between 35 and 40 degrees Celsius. A state of emergency has been declared in Sombor, Kula and Vrbas because of risks to navigation, supply chains and the energy sector. Water levels in the Danube, as well as the West, South and Great Morava rivers, are approaching the biological minimum, threatening the operation of the Đerdap 1 and Đerdap 2 hydroelectric power plants and the thermal power plants in Kostolac. Problems are also evident across the region, particularly in Hungary, Romania and Bulgaria, where emergency measures have been introduced. The drought is adversely affecting river transport, energy and agriculture, and the Ministry of Mining has authorised the use of reserves because fuel deliveries have become more difficult.

Večernje Novosti

9,000 Tonnes of Food Removed from Sale

In Serbia, more than 9,000 tonnes of food of animal origin were removed from sale and destroyed during the previous quarter due to irregularities detected in more than 1,500 veterinary inspections, which resulted in 418 corrective measures. The summer months are particularly risky because high temperatures increase the likelihood of food spoilage. Kilograms of unsafe products without proof of origin or safety were withdrawn from markets in Belgrade and Beočin.

TV Tanjug

Serbia's Nuclear Programme; Cooperation with France; Development of Energy-Sector Personnel

Serbia has signed an agreement with France's EDF on the first phase of developing its nuclear programme, Minister Dubravka Đedović Handanović said. The aim is to complete studies by the middle of next year that will lay the groundwork for a future construction decision. Provided that all conditions are met, Serbia's first nuclear power plant could be built after 2040.

Serbia on Track to Receive US LNG

Serbia is on track to receive US liquefied natural gas (LNG) through a new vertical gas corridor connecting Greece, Bulgaria, Romania, Moldova, Ukraine, Hungary, Slovakia, North Macedonia and Serbia. This would diversify the country's gas supply beyond the Russian gas currently available via TurkStream. Agreements establishing the corridor are expected in September, while gas interconnectors with North Macedonia and Romania are also part of the project.

NIS Activates Gas Resources; RSD 2 Billion Investment; Electricity Generation

NIS has launched trial operations at two small power plants located at the Banatsko Miloševo and Srpska Crnja gas fields, enabling electricity generation through the activation of previously unused gas resources. The total investment is worth almost RSD 2 billion, while the installed capacity of the facilities is 5 megawatts, the company said in a statement.
